

■ Lab-1: Build a simple calculator – add, subtract, multiply, divide two numbers

```
# Simple Calculator

num1 = float(input("Enter first number: "))
num2 = float(input("Enter second number: "))

print("Choose Operation:")
print("1. Add")
print("2. Subtract")
print("3. Multiply")
print("4. Divide")

choice = input("Enter choice (1/2/3/4): ")

if choice == "1":
    print("Result =", num1 + num2)

elif choice == "2":
    print("Result =", num1 - num2)

elif choice == "3":
    print("Result =", num1 * num2)

elif choice == "4":
    if num2 != 0:
        print("Result =", num1 / num2)
    else:
        print("Error! Division by zero is not allowed.")

else:
    print("Invalid Choice")
```

```
Enter first number: 5
Enter second number: 8
Choose Operation:
1. Add
2. Subtract
3. Multiply
4. Divide
Enter choice (1/2/3/4): 4
Result = 0.625
```

■ Lab-2: Number guessing game + student grade report generator

```
import random

secret_number = random.randint(1, 100)

print("Welcome to Number Guessing Game!")
print("Guess a number between 1 and 100")

while True:
    guess = int(input("Enter your guess: "))

    if guess < secret_number:
        print("Too Low!")
    elif guess > secret_number:
        print("Too High!")
    else:
        print("Congratulations! You guessed correctly.")
        break
```

```
Welcome to Number Guessing Game!
Guess a number between 1 and 100
Enter your guess: 65
Too High!
Enter your guess: 55
Congratulations! You guessed correctly.
```

Lab-3: Student report card system – read CSV, compute grades, write output

```
!PIP install pandas
```

```
/bin/bash: line 1: PIP: command not found
```

```
import pandas as pd

data = {
    "Name": ["Jayanth", "Rahul", "Priya", "Anjali"],
    "Math": [85, 70, 95, 55],
    "Science": [90, 65, 92, 60],
    "English": [88, 75, 98, 58]
}

df = pd.DataFrame(data)

df.to_csv("students.csv", index=False)

print("students.csv created successfully!")
```

```
students.csv created successfully!
```

```
import pandas as pd

def load_csv(filename):
    df = pd.read_csv(filename)
    return df

students_df = load_csv("students.csv")

print(students_df)
```

	Name	Math	Science	English
0	Jayanth	85	90	88
1	Rahul	70	65	75
2	Priya	95	92	98
3	Anjali	55	60	58

```
import pandas as pd

# Load CSV
def load_csv(filename):
    return pd.read_csv(filename)

students_df = load_csv("students.csv")

# Calculate Total and Percentage
students_df["Total"] = (
    students_df["Math"] +
    students_df["Science"] +
    students_df["English"]
)

students_df["Percentage"] = students_df["Total"] / 3

# Grade Function
def calculate_grade(percentage):
    if percentage >= 90:
        return "A+"
    elif percentage >= 80:
        return "A"
    elif percentage >= 70:
        return "B"
    elif percentage >= 60:
        return "C"
    elif percentage >= 50:
        return "D"
    else:
        return "F"

# Apply Grade Function
students_df["Grade"] = students_df["Percentage"].apply(calculate_grade)

# Save Report Card
students_df.to_csv("report_card.csv", index=False)
```

```
print(students_df)
print("Report Card Generated Successfully!")
```

	Name	Math	Science	English	Total	Percentage	Grade
0	Jayanth	85	90	88	263	87.666667	A
1	Rahul	70	65	75	210	70.000000	B
2	Priya	95	92	98	285	95.000000	A+
3	Anjali	55	60	58	173	57.666667	D

Report Card Generated Successfully!

■ Lab-4: Explore a real dataset (IPL / Zomato / COVID India) – answer 10 questions with Pandas

```
import pandas as pd

df = pd.read_csv("IPL_matches.csv")

print(df.head())
print(df.shape)
```

	ID	City	Date	Season	MatchNumber	\
